## Note:

“—” =Not regulated

mg/kg=ppm= parts per million

MDL=method detection limit

N.D.=not detected(less than method detection limit)

Results shown as N.D. are ignored in the sum calculation.

Result(s) of specimen(s) 1~2 is(are) quoted from HCT report No.SZC18061280442-2.

The detected Chromium (Cr) content is "N.D.", therefore, the Hexavalent Chromium (Cr (VI)) content is "N.D.", No need for validation test of the Hexavalent Chromium (Cr (VI)).

If Chromium (Cr) content exceeds Hexavalent Chromium (Cr (VI)) method detection limit, Validation test of the Hexavalent Chromium (Cr (VI)) is required.

According to the declaration from the client, Lead(Pb) in specimen(s) is(are) exempted by EU RoHS Directive 2011/65/EU and its amendment Directive EU 2015/863 base on:

##7(a) Lead in high melting temperature type solders (i.e. lead-based alloys containing 85 % by weight or more lead).

- ◆ = a. The sample is positive for Cr(VI) if the Cr(VI) concentration is greater than  $0.13\mu\text{g}/\text{cm}^2$ . The sample coating is considered to contain Cr(VI);
- b. The sample is negative for Cr(VI) if Cr(VI) is ND (concentration less than  $0.10\mu\text{g}/\text{cm}^2$ ). The coating is considered a non-Cr(VI) based coating;
- c. The result between  $0.10\mu\text{g}/\text{cm}^2$  and  $0.13\mu\text{g}/\text{cm}^2$  is considered to be inconclusive -unavoidable coating variations may influence the determination;

Information on storage conditions and production date of the tested sample is unavailable and thus Cr(VI) results represent status of the sample at the time of testing.
